

Mohammad Hossein Ziaee

Product Designer

Tehran, Iran +98 936 984 0202 mhziaee@gmail.com linkedin.com/in/mhziaee

SUMMARY

Product Designer with 8+ years of experience — including 4+ years at Digikala, Iran's largest e-commerce marketplace — spanning e-commerce, ed-tech, and B2B SaaS. At Digikala, owned end-to-end design across search, AI-powered shopping, fulfillment discovery, review systems, and 0-to-1 social-commerce products, with a consistent record of shipping design-led experiments that move core business metrics: a 28.7% relative lift in search autocomplete CTR across 1.17M+ units, and a community product taken from zero to 200,000+ engaged users in two months. Skilled at turning ambiguous, cross-squad problems into testable hypotheses and partnering closely with Product, Engineering, and Data from discovery through experimentation and production rollout.

CORE SKILLS

Product & Strategy: Product Discovery, Product Strategy, End-to-End Product Design, Design Thinking, Growth Design, AI Product Design

Research & Experimentation: User Research, UX Research, A/B Testing, Data-Driven Design, Product Analytics, Problem Solving

UX & Interaction: Interaction Design, Information Architecture (IA), Search UX, Conversation Design, Wireframing, Prototyping, User-Centered Design

Collaboration & Tools: Figma, Product Management Collaboration, Stakeholder Management, Cross-Functional Collaboration, E-Commerce

EXPERIENCE

Product Designer — Digikala Tehran, Iran | 2022 – Present

- Led design and experimentation for a search autocomplete redesign across mobile and desktop, restructuring search entry into a multi-intent discovery system spanning history, trending, brands, sellers, and AI-assisted prompts; increased autocomplete CTR from 0.465 to 0.598 (+28.7% relative) in a design-only A/B test across 1.17M+ units with a 100% chance to win.
- Redesigned Digikala's review submission flow as sole Product Designer; ran an A/B/C test of single-step vs. two-step variants and selected the winner based on ecosystem-level output, driving +24.6% daily reviews (~7,000/day), +17.4% daily reviewers, and +16.4% form conversion.
- Owned end-to-end design of an AI-generated Review Summary feature, partnering with Product and Engineering on prompt structure and model output; validated entry-point placement through A/B testing (2x CTR vs. a banner treatment) and achieved a +3% relative lift in PDP-to-Add-to-Cart conversion, scaling to 167,000+ eligible products.
- Led Discovery design for a strategic 3-hour-delivery initiative spanning Homepage, product listing, cart, and shipment; shipped an address-aware Homepage carousel in ~10 days that generated 15% of cart closures for eligible products and improved CTR by 10% through A/B testing, with no negative impact on Homepage performance.
- Sole Product Designer for a 0-to-1 community-driven social-commerce product taken from concept to launch on App and Mobile Web in ~2 months; the product reached 202,590 engaged users, 60,204 questions, and 173,516 answers, exceeding its 24-hour answer-rate target by 46.8% relative.
- Designed and shipped a unified entry experience merging Digikala's AI shopping assistant and support chatbot in a 2-week sprint, using context-aware routing and a persistent segmented-control pattern; supported growth in AI assistant adoption from under 1% to approximately 3.7% of active users while keeping support usage stable.

Product Designer — Lingotalk Tehran, Iran | Sep 2019 – May 2022

- Owned end-to-end product design for an online language-learning platform connecting learners and teachers for live one-on-one lessons, from user research and flow definition through prototyping and scalable UI systems.
- Partnered with engineering and business stakeholders in a fast-paced startup environment to validate ideas and prioritize features, contributing to zero-to-one product development while balancing user needs, business goals, and technical constraints.

Product Designer — First Eurasia eCommerce Tehran, Iran | Mar 2018 – May 2019

- Redesigned the B2B e-commerce homepage and lead-generation flows, reducing bounce rate by 40% and increasing qualified leads by 15%.
- Designed new features and improved the UX and visual design of Payam Gostar CRM, a company SaaS product, contributing to a 25% increase in sales and improved customer satisfaction.
